

FACTSHEET

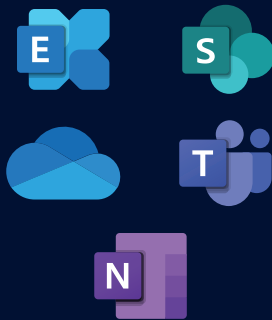

Real Cloud-to-Cloud Backup for
Microsoft 365

That's CLOUD 2 CLOUD

With CLOUD 2 CLOUD, data can be encrypted and transmitted DIRECTLY to MOUNT10 and stored under SWISS FORT KNOX conditions simply, securely, and without detours.

The CLOUD 2 CLOUD web portal connects to the Microsoft 365 platform. The e-mail, SharePoint, OneDrive and Teams data are selected and saved directly to MOUNT10 on a regular basis.

 Microsoft 365

SWISS FORT KNOX I + II

10 YEARS HISTORY

Functions and advantages

SWISS FORT KNOX I & II

The data is encrypted and stored redundantly in Europe's most secure data centres. The data is stored exclusively in Switzerland.

Data recovery

Data can easily be restored to Microsoft 365. Instant data also provides the ability to restore data directly to local infrastructure.

End-to-end encryption

The data is encrypted on the Microsoft AES 256-bit infrastructure, before the data is transferred. This means that only the customer has access to the data.

Web-based backup

No software needs to be installed with CLOUD 2 CLOUD. Thanks to the direct connection between Microsoft 365 and MOUNT10, the backup is performed automatically on a daily basis.

Service Operation Center (SOC)

MOUNT10 checks the backup process daily and proactively creates logs in case of any anomalies. The SOC is always happy to answer questions 24/7.

Password

The password generates an encryption key. This way, only the owner of the password can access the data. If lost, the data cannot be recovered.
