

MOUNT10 Backup History

This document describes the backup history of all products that are based on our software manufacturer Redstor are built. The procedure is the same, but differs in the retention period of the data.

The methodology is as follows: All backup inventories from the current month and the previous month are retained. If a new month begins, all backup data from the month before last is deleted after the first successful backup, except for the last backup stock of the month that is available. This is called the month-end inventory or rollup.

This means that every backup from the current month (1 to max. 30/31), every status from the previous month (30 or 31 statuses if once a day) and every month-end inventory of all previous months are available.

All backup stocks from the current month and the previous month are available for all products. The data history and therefore the number of month-end backups vary depending on the product and configuration:

Product

Number of month-end stocks

CLOUD2CLOUD
COMBO
COMBO
COMBO3
COMBO3

120 months
120 months (Standard)
999 months (Surcharge)
3 months (Standard)
12 months (Surcharge)

MOUNT10 Backup History

Current month and previous month
All backups are available

All previous months*
Only the last backup of the month is available

*COMBO: 10 years / unlimited backup history
COMBO3: 3 months backup history
