

DATA SHEET

Veeam Cloud Connect with deletion protection

This is ImmutableVEEAM@MOUNT10

ImmutableVEEAM@MOUNT10 is based on Veeam Cloud Connect. MOUNT10 ensures that data history of 7 or 30 days is always available and cannot be deleted or tampered with.

Veeam Backup & Replication transfers the data automatically and pre-encrypted to SWISS FORT KNOX in a defined cycle.

Functions and advantages

7- or 30-days deletion protection

A reserved volume is available to the customer. Depending on the situation, around 3 to 5 times the space of the original amount of data is required for deletion protection.

SWISS FORT KNOX

The data is stored in encrypted form in the most secure data centre in Europe. The data is stored exclusively in Switzerland.

Service Operation Center (SOC)

MOUNT10 checks the backup process daily and proactively creates logs in case of any anomalies. The SOC is always happy to answer questions 24/7.

Rescue after ransomware attacks

Due to the deletion protection, cyber criminals cannot delete or manipulate data history of the last 7 or 30 days. This paves the way back to normality.

End-to-end encryption

The data undergoes AES 256-bit encryption locally on the customer's infrastructure before being transferred. This means only the customer has access to the data.

Encryption Key

The encryption key is used to encrypt the data. This way, only the owner of the key can access the data. If lost, the data cannot be recovered.
