& Restore

How CLOUD 2 CLOUD works

As part of the CLOUD 2 CLOUD (C2C) solution, there is a web portal in Microsoft's Azure Cloud. The C2C web portal is operated by our long-standing partner and software manufacturer Redstor.

This platform ensures the connection between Google Workspace and MOUNT10.

How the data is backed up

1. The customer will receive login details for the C2C web portal from MOUNT10
2. The customer uses this to log into the C2C web portal via their browser
3. Set-up permissions in Google Workspace
4. Via the „Set backup“ menu, the product to be backed up (Gmail, Contacts, Calendar, Drive, Classroom) is defined together with the backup interval
5. The connection between Google Workspace and MOUNT10 is now guaranteed and the data is protected

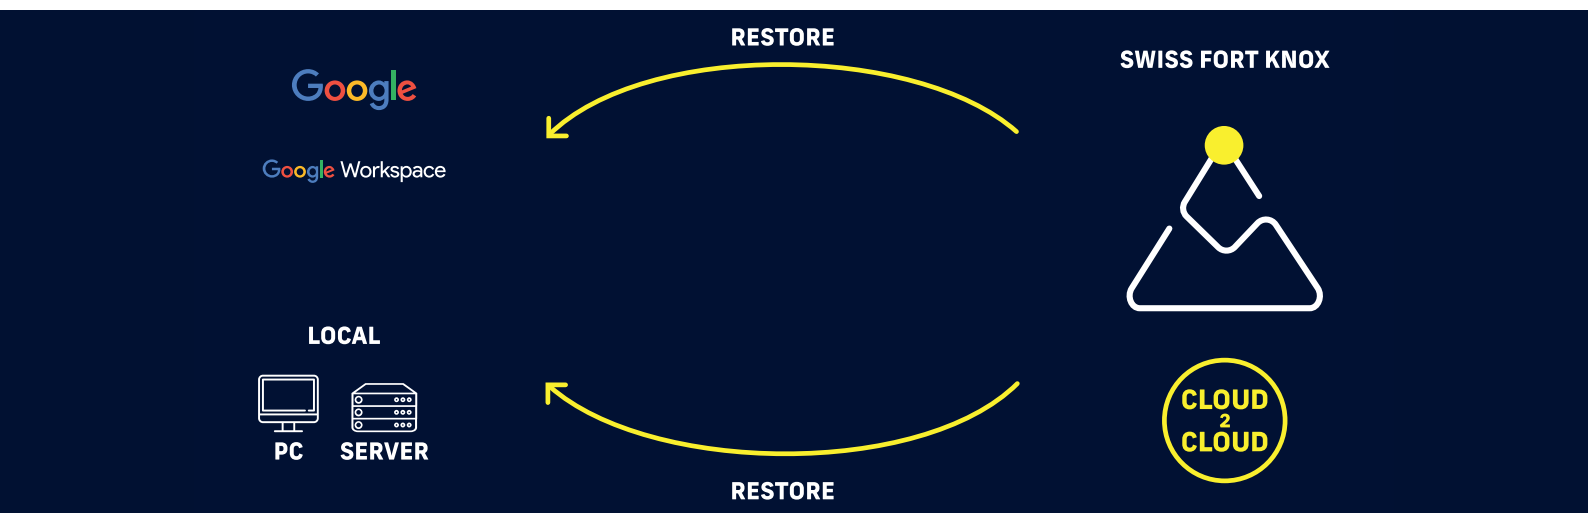

FUNCTIONS

Setup, Backup
& Restore

How the data can be restored

The backed-up data can be restored in the C2C web portal either directly to Google Workspace or locally.

Thanks to these two options, the customer has flexibility in restoring the data and can cover all scenarios.

Which Google Workspace editions can be secured with CLOUD 2 CLOUD

Business Starter

Business Standard

Business Plus

Enterprise

Scope of functions

Drive

- Entire Drive Content

Gmail

- E-Mails
- Labels

Classroom

- Courses
